The invention relates to a mammalian K+ channel protein with two pore domains, called TREK2 (TWIK-Related K+ Channel). The protein produces currents whose current-voltage relationship is slightly inwardly rectifying in high symmetrical K+ conditions. TREK2 is a member of fatty acid-activated and mechanosensitive K+ channel family. TREK-2 gene located on chromosome 14g31 is abundantly expressed in kindey, pancreas and moderately in testis, brain, colon and small intestine. The mammalian K+ channel protein is useful in methods for screening various compounds. In particular, the protein is useful in methods for identifying biologically active compounds with anaesthetic properties. The present sequence is TREK-1 protein used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         LGTIFGKGIAKVEDTFIKWNVSQTKIRIISTIIFILFGCVLFVALPAIIFKHIEGWSALD 240

The invention relates to a novel isolated GPCR (G-protein coupled receptor) nucleic acid molecule. The polymucleotide and polypeptide of the invention demonstrate neuroprotective, nootropic, tranquiliser, antimigraine, neuroleptic, antimanic, antidepressant, anticonvulsant, antiparkinsonian, cytostatic, cardiant, hypotensive, antianginal, antiparkinsonian, cytostatic, cardiant, hypotensive, antianginal, analgesic, anorectic, anti-HIV, antiasthmatic, osteopathic, uropathic, analgesic, anorectic, properties. The mucleic acid molecule and polypeptide of the invention may be useful in diagnosing, preventing, treating or ameliorating a medical condition, such as a disorder related to aberrant G-protein coupled signalling, a disorder related to aberrant cell cycle regulation, neurological disorders, spinal cord disorders, immunological disorders, mophastic disorders, spinal cord disorders, immunological disorders, endocrinal diseases, immunological disorders, motabolic disorders and pituitary disorders. Furthermore, the polynucleotide may be used in chromosome identification, in identifying organisms from minute current sequence is that of a human GPCR (G-protein coupled receptor) protein which was isolated by the method of the invention.
                                                                                                                                                                      tranguiliser; antimigraine, peur; antimanic; antidepressant; anticonvulsant; antiparkinsonian; cytostatic; cardiant; hypotensive; antiangunai; antiparkinsonian; cytostatic; cardiant; hypotensive; antiangunai; antiasthmatic; osteopathic; uropathic; antiulcer; antiallergic; call cytole regulation; neurological; severe mental retardation; dyskinesia; brain; spinal cord; affective; neoplastic; cardiovascular; immunological; immune; endocrinal; growth; carting; HIV infection; cancer; metabolic; pituitary; chromosome identification; gene therapy; human; receptor; twin pore channel; potassium channel subfamily K member 2 variant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New nucleic acid molecule encoding a human G-protein coupled receptor, useful for diagnosing, preventing or treating diseases involving the receptor, e.g. Parkinson's disease, dementia, asthma, hypertension or

The invention relates to a mutant potassium ion channel protein, having four membrane spanning domains and two pore forming domains, comprising a mutation at the second pore forming domain. The expression of the mutant protein in a cell confers improved inward potassium flux and the ability to grow in the presence of potassium. Mutant proteins and their corresponding polymucleotide sequences can therefore be used to improve inward potassium flux into cells under acidic conditions by modulating the membrane potential using therapeutic agents. The sequences may be used to develop agenists and antagonists of potassium channel proteins in order to control peets such as nematodes and insects. This sequence represents a human transmembrane potassium ion channel proteins in
                                                                                                                         240

four membrane spanning domains and two pore forming domains, comprising a mutation at the second pore forming domain. The expression of the mutant protein in a cell confers improved inward potassium flux and the ability to grow in the presence of potassium. Mutant proteins and their corresponding polynucleotide sequences can therefore be used to improve inward potassium flux into cells under acidic conditions by modulating the membrane potential using therapeutic agents. The sequences may be used to develop agonists and antagonists of potassium channel proteins in order to control pests such as memarodes and insects. This sequence

                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                       four membrane spanning domains and two pore forming domains, comprising a mutation at the second pore forming domain. The expression of the mutant protein in a cell confers improved inward potassium flux and the ability to grow in the presence of potassium. Mutant proteins and their corresponding polynucleotide sequences can therefore be used to improve inward potassium flux into cells under acidic conditions by modulating the membrane potential using therapeutic agents. The sequences may be used to develop agonists and antagonists of potassium channel proteins in order to control pests such as nemacodes and insects. This sequence represents a human transmembrane potassium ion channel TPKCI mutant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   'n
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a mutant potassium ion channel protein, having mutation at the second pore forming domains, comprising a mutation at the second pore forming domain. The expression of the mutant protein in a cell confers improved inward potassium flux and the ability to grow in the presence of potassium. Mutant proteins and their borresponding polymucleotide sequences can therefore be used to improve inward potassium flux into cells under acidic conditions by modulating the membrane potential using therapeutic agents. The sequences may be used to develop agonistes and antagonistes of potassium channel proteins in order to control pests such as nematodes and insects. This sequence represents a human transmembrane potassium ion channel TPKCI mutant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        four membrane spanning domains and two pore forming domains, comprising a mutation at the second pore forming domain. The expression of the mutant protein in a cell confers improved inward potassium flux and the ability to grow in the presence of potassium. Mutant proteins and their corresponding polymuclachies sequences can therefore be used to improve inward potassium flux into cells under acidic conditions by modulating the membrane potential using therapeutic agents. The sequences may be used to develop agonists and anteagonists of potassium channel proteins in order to control pests such as nematodes and insects. This sequence represents a human transmembrane potassium ion channel TPKCI mutant

The invention relates to human and mouse TREK-1 potassium channel proteins and their corresponding DNA molecules. TREK-1 nucleic acid is useful for transfecting cells to induce expression of the TREK-1 potassium channel protein. These cells are then used in assays to identify compounds which have anaesthetic properties, producing a safe, reversible state of unconsciousness with concurrent amnesia and analgesia in a mammal upon inhalation. The present sequence is murine TREK-1
Novel nucleic acid encoding a TREK-1 potassium channel protein for transfecting cells to be used to identify compounds with anesthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Length 411;

The polynucleotide sequence of h-TREK1 can be used to diagnose a disease or susceptibility to a disease related to expression or activity of h-TREK1 polypeptides. The methods of diagnosis may be used in the treatment of

                 -!- SUBUNIT: Homodimer (Potential).
-!- SUBCELLULAR LOCATION: Integral membrane protein (Potential).
-!- MISCELLANEOUS: Activated by volatile general anaesthetics such as chloroform, halothane and isoflurane.
-!- SIMILARITY: Belongs to the two pore domain potassium channel
(TC 1.A.1.8) family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 MAAPDLLDPKSAAQNSKPRLSFSTKPTVLASRVESDTTINVMKWKTVSTIFLVVVLYLII

Submitted (NOV-2003) to the EMBL/GenBank/DDBJ databases.

-1- SIMILARITY: Belongs to the two pore domain potassium channel (TC 1.A.1.8) family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       -I- FUNCTION: Outward rectifying potassium channel.
-I- SUBMIT: Homodiner (Potential).
-I- SUBMIT: Homodiner (Potential).
-I- SUBCELLULAR LOCATION: Integral membrane protein (Potential).
-I- TISSUE SPECIFICITY: High expression in brain and lung. Also detected in kidney, heart and skeletal muscle. Not detected in liver. In the brain, highest expression in olfactory bulb, hippocampus and cerebellum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mus musculus (Mouse).

                            IsoId=Q9NYG8-2; Sequence=VSP 006689;
Note=May be produced at very low levels due to a premature stop codon in the mRNA, leading to nonsense-mediated mRNA decay;
SIMILARITY: Belongs to the two pore domain potassium channel
(TC 1.A.1.8)

EMBO J. 17:3297-3308(1998).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nat. Neurosci. 2:422-426(1999).
-!- FUNCTION: Voltage insensitive, instantaneous, outwardly rectifying potassium channel. Outward rectification is reversed at high external K(+) concentrations.
-! SUBMINI: Homodimer (Potential).
-!- SUBCELLULAR LOCATION: Integral membrane protein (Potential).
-!- ALTERNATIVE PRODUCTS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MISCELLANEOUS: Activated by arachidonic acid and other unsaturated fatty acids. Not affected by volatile general anaesthetics such as chloroform, diethyl ether, halothane and isoflurane.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                  US-09-503-089A-2

Sequence 8, Application US/09144914

Sequence 8, Application US/09144914

Patent No. 6309855

GENERAL INFORMATION:

APPLICANT: Duprat, Fabrice

APPLICANT: Lesage, Florian

APPLICANT: Lasdunski, Michel

APPLICANT: Laddunski, Michel

TITLE OF INVENTION: FAMILY OF MAMMALIAN POTASSIUM CHANNELS, THEIR CLONING

TITLE OF INVENTION: AND THEIR USE, ESPECIALLY FOR THE SCREENING OF DRUGS

FILE REFERENCE: 989.6705CIP

CURRENT FPLING DATE: 1998-09-01

EARLIER APPLICATION NUMBER: 08/749,816

EARLIER FILING DATE: 1996-01

EARLIER FILING DATE: 1996-04

EARLIER FILING DATE: 1996-04

EARLIER FILING DATE: 1996-06

EARLIER FILING DATE: 1996-06
